Patient Information

Gender: Female
Age: 26
Hypertension: 0
Heart Disease: 0
Smoking History: never
Bmi: 25.0
Hba1C Level: 5.5
Blood Glucose Level: 145
Bmi Category: Overweight
Age Group: 21-40

Prediction

Prediction: Low Diabetes Risk
Risk Probability: 0.00%

AI Clinical Summary

Clinical Summary

Based on the provided patient data, the Random Forest model predicts a Low Diabetes Risk with a probability of 0.00%. This indicates a very low likelihood of diabetes according to the model's assessment.

Major Risk Factors

The factors contributing to this low-risk prediction include:

- * Normal HbA1c level (5.5%)
- * No history of smoking
- * No history of hypertension
- * No history of heart disease
- * BMI within the normal range (25.0)

Lifestyle Recommendations

1. Maintain a balanced diet rich in whole foods and low in processed sugars.
2. Engage in regular physical activity, aiming for at least 150 minutes of moderate-intensity exercise per week.
3. Continue to monitor blood glucose levels as advised by your healthcare provider, especially given the current reading of 145.
4. Maintain a healthy body weight through diet and exercise.

Important Note

This is an AI-generated educational summary based on the provided data and model prediction. It is not a medical diagnosis and should not replace professional medical advice from a qualified healthcare provider. Always consult with your doctor for any health concerns or before making any decisions related to your health or treatment.
