

Patient Information

Gender: Male
Age: 40
Hypertension: 0
Heart Disease: 0
Smoking History: never
Bmi: 25.0
Hba1C Level: 5.5
Blood Glucose Level: 120
Bmi Category: Overweight
Age Group: 21-40

Prediction

Prediction: Low Diabetes Risk
Risk Probability: 5.00%

AI Clinical Summary

Clinical Summary

The machine learning model predicts a low diabetes risk for this patient, with a probability of 5.00%. This assessment is largely supported by several favorable health indicators, including a normal BMI, a healthy HbA1c level, and the absence of smoking history, hypertension, or heart disease. However, it is important to note the current blood glucose level of 120 mg/dL. While the overall risk is low, this level falls on the higher end of the normal range and into the prediabetes range if it is a fasting measurement, suggesting a need for continued monitoring and proactive lifestyle choices.

Major Risk Factors

The following patient factors primarily contributed to the model's prediction of low diabetes risk:

- * **Normal BMI (25.0):** Indicates a healthy weight status, which is protective against diabetes.
- * **Normal HbA1c (5.5%):** Reflects healthy average blood sugar levels over the past 2-3 months.
- * **No Smoking History:** Absence of a significant modifiable risk factor for diabetes.
- * **No Hypertension or Heart Disease:** Absence of major comorbidities often associated with increased diabetes risk.

Lifestyle Recommendations

- Maintain a Balanced Diet:** Focus on whole grains, lean proteins, fruits, and vegetables, limiting processed foods, added sugars, and unhealthy fats.
- Engage in Regular Physical Activity:** Aim for at least 150 minutes of moderate-intensity aerobic exercise weekly, along with muscle-strengthening activities.
- Maintain a Healthy Weight:** Continue efforts to keep BMI within the healthy range through consistent diet and exercise.
- Regular Medical Check-ups:** Ensure ongoing health monitoring and discuss the blood glucose level with your healthcare provider for personalized advice and follow-up.
